

Watcher Guide (Monitor app)

The Monitor app lets you follow one specific person live — a family member on a ride, a lone worker, a teammate. You watch just them on a map and can send them a message that's read aloud on their phone.

1 • Get their code

1. Ask the person you want to watch for their **watch code** (shown on their phone in Global mode), or have them send you a **named invite** (Private mode).
2. A watch code lets anyone with it follow; a private invite is named and can be revoked anytime.

2 • Pair and watch

1. Install the **KETRACK Monitor** app and open it.
2. Enter the watch code (or open the invite) and tap to pair.
3. You'll see them live on the map with their route, speed, distance, and time.

3 • Reach them

1. Send a message from the Monitor — it's **spoken aloud** on their phone, hands-free.
2. If they're in Private mode, they can revoke your invite at any time and you'll stop seeing them.

Watching one person 1-to-1 is separate from an organizer's event board — either or both can watch the same person at once. ketrack.com
